

Dramatic level increase in original IC-7300 hand microphone HM-219

Very simple modification to perform with great results.

1 ---- Remove the rear cover of your HM-219 microphone

2 ---- Locate the 2K2 resistor that is just below the capacitor as seen in the images (in your microphone unmodified the resistor will be).

3 ---- With the help of a soldering iron remove the resistor, and shorting two pads with a drop of tin.

4 ---- Reinstall the back cover.

5 ---- ... Enjoy your new microphone
